Syteca Privileged Access Management (PAM)

Granular access controls Selective user permissions Zero data compromise

In 84% of infrastructure incidents in 2024 the initial access vector could have been mitigated*

Lack of robust PAM measures increases organizational security risks:

- Abuse of valid accounts occurs in 30% of security incidents.*
- Stolen credentials are used in 24% of data breaches, making it the most common attack vector.**

Ensure every interaction with your critical assets is secured

Syteca's powerful privileged access management capabilities enable you to maintain control of user access permissions.

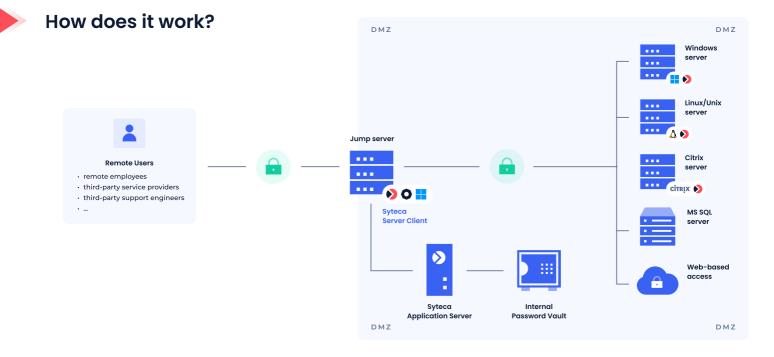

Syteca PAM empowers organizations to safeguard their most valuable assets against unauthorized use and misuse of access privileges by streamlining access provisioning and monitoring of privileged users.

Secure access to critical endpoints, protect privileged account credentials, and monitor user activity — all with a single platform.

Syteca provides targeted solutions for your access management needs

The challenge	Syteca Privileged Access Management	
Ensuring that everyone has the right level of access and keeping security risks under control.	Granular access management for your organization's endpoints. Verify user identities, grant permissions, and reduce the risks of unauthorized access.	 Endpoint access control Multi-factor authentication (MFA) Secondary authentication Approval workflows Time-based access restrictions
Eliminating the use of weak passwords and controlling password sharing to protect your systems from threats.	Centralized password management for privileged and general user accounts. Automate storage and password rotation and enable secure credential sharing among teams.	 Secure password vault Credentials sharing Automated password rotation Password check-in & check-out
Maximizing oversight of user activity to prevent privilege misuse that might compromise critical data.	Privileged user session monitoring offers real-time oversight and control over how privileged users handle sensitive data and systems. Detect and respond to suspicious user activity promptly and effectively.	 Session recording Advanced search across monitored user activity User activity reports and dashboar Rule-based alerts and incident response
Eliminating blind spots in cybersecurity introduced by unmanaged privileged accounts.	Identification of all privileged accounts with regular scans of your network and onboarding of new accounts to ensure proper management.	 Automated privileged account discovery Scan scheduling In-bulk account onboarding

Meet cybersecurity standards: HIPAA, PCI DSS, NIS2, DORA, NIST, GDPR, SWIFT, ISO
