

HackerOne Bounty

Continuous Human-Powered Testing

Traditional methods of identifying vulnerabilities often fall short. Internal security teams and automated scanning tools miss critical vulnerabilities due to understaffed security teams, resource constraints, limited agility, and the inability to detect novel and elusive threats.

HackerOne Bounty significantly reduces your threat exposure by tapping into the largest global community of ethical hackers. Match the best security researchers to your specifications and incentivize them with rewards for discovering vulnerabilities. This effectively complements traditional security assessments as an added layer of protection that catches undetected and often the most critical vulnerabilities.

We have to make sure we stay two steps ahead of any malicious actor. By paying out monetary rewards to ethical hackers, we harden our defenses in a very impactful way. This crowd-sourced security approach is a key step to identifying and closing potential gaps in our attack surface.

Katie Savage,
Deputy Chief Digital & Artificial Intelligence Officer
U.S. Department of Defense

How it works

Through a centrally managed platform, set the rules of engagement for your bounty program, including in and out-of-scope assets, types of vulnerabilities, allowed testing methodologies, and reward structure. Depending on the program type, hackers are assigned to your program or can find it publicly. Triage services reduce noise by providing comprehensive vulnerability analysis, validation, and remediation advice.

- Benefit from key program metrics and industry benchmarking data
- Streamline workflows with over 20 SDLC integration tools
- Leverage AI for deeper and immediate insights into your security program
- Enable faster and more informed decision-making

HackerOne Bounty Advantages

Hacker Community

Access the world's largest community of ethical hackers, offering diverse expertise to identify elusive vulnerabilities.

Continuous Security

Encourage and support continuous discovery of vulnerabilities to proactively strengthen your systems against potential threats.

Vulnerability Management

Ensure timely vulnerability remediation through a centralized platform for reporting, tracking, and prioritizing security issues.

Built For Scalability

Accommodate diverse levels of participation and engagement, whether managing a small, private program or launching a large, public initiative.

Let us handle the noise

Our Triage Team, comprised of seasoned security experts, filters through the noise, communicates with hackers, validates submissions, removes duplicates, and delivers impactful results to resolve issues quickly.
