

CYBERDISE

Bessere IT-Sicherheit, KI-gestützte Cybersecurity Sensibilisierung

Cyberdise dient zur Ausbildung der Mitarbeiter und zur Simulation von Social Engineering Angriffen. Das Produkt eignet sich für KMUs bis hin zu Grosskunden. Die Schweizer Lösung stellt vorkonfigurierte Phishing-Vorlagen und Schulungs-Module zur Verfügung, welche durch den Operator selbständig verwendet und angepasst werden können.

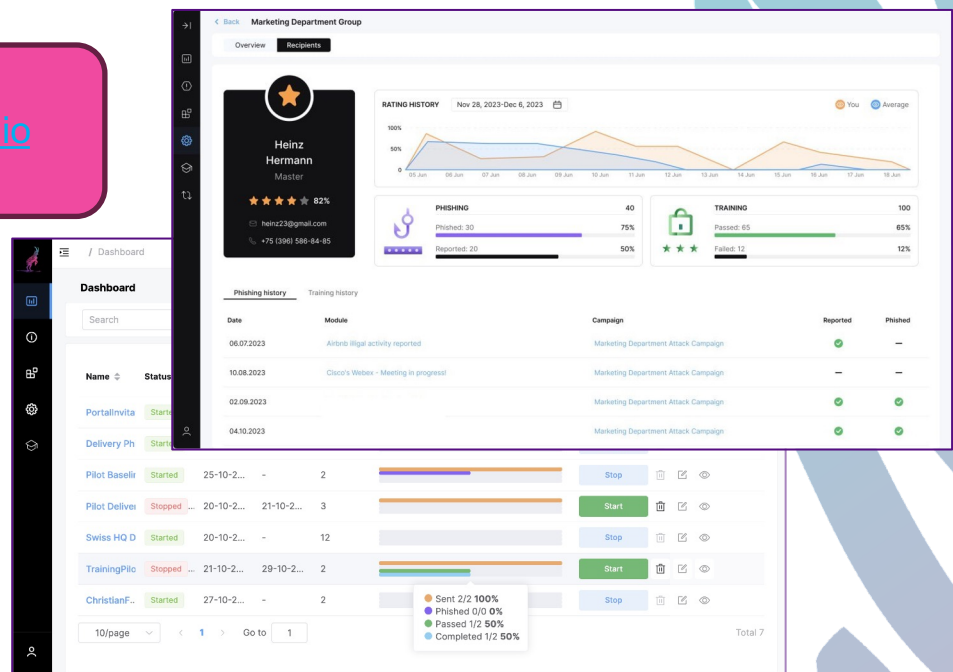

Durch das „Phishing Incident Plugin für MS-Outlook© / Gmail© hat der Benutzer dazu noch die Möglichkeit, im Angriffsfall rasch Alarm zu schlagen. Das Produkt wurde von Grund auf neu entwickelt und wurde von Anfang an auf die Verwendung mit Hilfe von KI ausgelegt. Die aktuelle Version erlaubt die Erstellung von KI unterstützten Spear Phishing Kampagnen und der Cybersecurity Chatbot beantwortet dem Benutzer konkrete Fragen zur Unternehmenssicherheit. Partner in Deutschland und in der Schweiz runden mit Ihren Leistungen das Angebot ab.
